

# LoRaWAN® IP68 PULSE READER + M-BUS UM3033

LoRaWAN® IP68 pulse reader, enables acquisition of data from the pulse emitting devices and M-Bus slave devices and transmits it wirelessly to the LoRaWAN® network.

LoRaWAN® IP68 pulse reader is meant to be connected to the existing devices' pulse or to a M-Bus slave device. It is powered by a long-life battery.

# OVERVIEW

## Efficient

LoRaWAN® IP68 Pulse Reader has a bidirectional, battery powered, long-range transceiver with low power consumption.

## Intelligent

Real-time usage data is gathered wirelessly and processed automatically. Data is accessible from your LoRaWAN® provider.

# APPLICATIONS

## Pulse metering

Frequent reporting provides a detailed usage overview. Can be used with any pulse emitting device (water, electricity, gas meter, etc.).

## M-Bus interface

M-bus master, to be used with external power source.

## Usage detection

LoRaWAN® Pulse Reader can be configured to trigger mode to send alerts when usage is detected.

# FEATURES

- Long range wireless data transmission
- Pulse counting
- M-Bus interface
- Pre-installed long-life battery (M-Bus needs external power supply)
- Built-in antenna
- DIN rail mount
- Trigger mode
- Configurable reporting interval
- Maintenance free - install & forget
- Easy installation
- Average life 8 years\*
- Secure communication

\* Lifetime depends from the device location and reporting interval.

# SPECIFICATIONS

Length:	109 mm
Height:	27 mm
Width:	27 mm
Weight:	72 g
Cable length:	1 m
Operating temperature:	-20°C ... +65°C
Communication range:	up to 15 km*
Tx power:	up to +20 dBm
Rx Sensitivity:	-142 dBm
MAC Layer:	LoRaWAN®
Physical Layer:	LoRa®
Connector:	M8
Body material:	PA6
IP Rating:	IP68
Communication:	LoRaWAN®

\* Communication range is dependent on the location of the sensor and nearest base station.

# INPUT SPECIFICATIONS

Digital	Max Frequency: 15 Hz
	(Dry contact) Pulled internali to: 3 V
	(Active contact) Max voltage: 6 V
M-Bus	Max slave count: 1 (using broadcast address 0xFE)
	Min supply voltage: 30V
	Max supply voltage: 40V
	Baud rate: 2400 (M-Bus default)
	Min supply current: 50mA
	Max current between M-Bus+ & M-Bus -: 50mA

# COMMUNICATION

Bit order:	LSB
Usage reporting:	Unconfirmed messages
Status reporting:	Confirmed messages

# PORT LIST

# fPort 24 Status Message

Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte ..	Byte n
Interface map	Battery	Temp	RSSI		Interface status blocks	
	uint8 (mapped)*	int8 (°C)	int8 (dBm)		Described below	

Bit #	Parameter	Value
0	Digital 1	0 - not sent 1 - sent
1	Digital 2	
2	RFU	
3	RFU	
4	RFU	
5	M-Bus	0 - not sent 1 - sent
6	User triggered	0 - false 1 - true
7	RFU	

Interface values are reported according to the interface map in the order defined in the interface map

\* depends from the battery type. (reported in boot message)

Status message can be triggered with 1 second magnet switch (same place as activating). The time between two consecutive packets is dependent of the duty cycle. If the message is triggered too often, it will go to lockdown for 1 hour. It will still be working as meant to, but will not send any data.

## Digital interface status block

r Byte 0	r Byte 1	r Byte 2	r Byte 3	r Byte 4
Settings			Counter

## Interface configuration

Byte 0	Byte 1	Byte 2	Byte ..	Byte n
Header	Settings			Interface configuration blocks
0x01				Described below

Diagram illustrating the structure of the Interface configuration. The Header (Byte 0) contains the value 0x01. The Settings (Byte 1) section is expanded to show a detailed table of configuration parameters. The table has columns for Bit #, Parameter, and Value. The Value column includes a note: 0 - not sent, 1 - configured.

Bit #	Parameter	Value
0	Digital 1 reporting	0 - not sent 1 - configured
1	Digital 2 reporting	
2	RFU	
3	RFU	
4	RFU	
5	M-Bus	0 - not sent 1 - configured
6	RFU	
7	RFU	

## Digital interface configuration block

The diagram illustrates the mapping of digital interface configuration bits to bytes and parameters. It consists of three main tables:

- Table 1:** A vertical table showing the mapping of Bit # to Parameter and Value. Bits 0 and 1 are grouped under "Trigger mode" (Value: 0 - disabled, 1 - enabled). Bits 2 through 7 are grouped under "Trigger lenght\*" (Value: 00, 01, 02, 03 corresponding to 1 sec, 10 sec, 1 min, 1 h).
- Table 2:** A horizontal table showing the mapping of r Byte 0 to r Byte 9. The first two bytes (r Byte 0 and r Byte 1) are labeled "Configuration". The third byte (r Byte 2) is labeled "Mode". The fourth byte (r Byte 3) is labeled "Multiplier\*\*". The fifth byte (r Byte 4) is labeled "True reading". The remaining bytes (r Byte 5 to r Byte 9) are unlabeled.
- Table 3:** A vertical table showing the mapping of Bit # to Parameter and Value. Bits 0 through 3 are grouped under "Interface enable\*\*\*" (Value: 0 - disable, 1 - enable). Bits 4 through 7 are grouped under "Medium type\*\*\*\*" (Value: 00, 01, 02, 03, 04, 05, .., 0F corresponding to n/a, Pulses, Water in L, Electricity in Wh, Gas in L, Heat in Wh, RFU, RFU).

\* Configured together with Trigger mode. Otherwise must be 00

\*\* Multiplier is sent together with Unit type and True reading. In trigger mode Unit type is invalid and entire packet is discarded.

\*\*\* Disabled interface can not have any other configuration

\*\*\*\* Configured together with Multiplier. Otherwise must be 00

7	RFU		7			

\* Using the 1 sec interval will shorten the battery life significantly

\*\* Only channel marked as sent in config map should be configured

\*\*\* Only sent when the threshold flag is set in the Parameter config byte.

## Message sample

Message goal: Configure only M-Bus. Enable the interface and request data both in usage and status messages.

In usage message request: Volume in  $m^3 \times 10^{-2}$ , Temperature difference in  $^{\circ}C \times 10^{-1}$  and Power in  $W \times 10^2$ . In status

message request: Power in  $W \times 10^2$ , Max power in  $W \times 10^2$ , Energy  $W \times 10^3$  and Time and date.

# DIMENSIONS / PACKAGING

## Dimensions

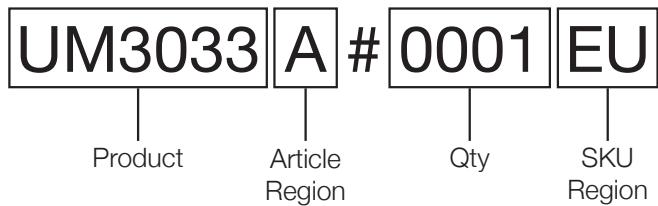

# WIRING GUIDE

M8 Sensor side

Pin	Wire color	Function
1	White	Digital 1
2	Brown	n/a
3	Grey	M-Bus -
4	Black	Gnd, Supply gnd
5	Blue	Digital 2
6	Pink	m-Bus +, Supply (24-36V)

# ORDERING INFORMATION

Product/SKU	Package qty	Version
UM3033x#0001xx	1	Digital + M-Bus

Article region	SKU region	Frequency
A	EU	868 MHz
B	AU	915 MHz
C	US	915 MHz
D	AS	923 MHz
E	CN	779 MHz
F	KR	920 MHz
G	EU	433 MHz
H	CN	470 MHz
I	IN	865 MHz
